Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT integrin - and related grafted antibodies based on murine monoclonal
PT LM609, also related nucleic acid, used to treat, prevent or diagnose
PT angiogenesis or restenosis
XX
PS Claim 62; Page 41; 129pp; English.
XX
CC W76007-W76040 are protein fragments of the grafted monoclonal antibody
CC LM609 heavy and light chain variable region. LM609 and the antibody
CC vitaxin bind selectively to integrin alphavbeta3 and can be used to
CC inhibit binding of alphavbeta3 to a ligand and thus block
CC integrin-mediated signal transduction. This is useful in the treatment,
CC prevention and diagnosis of alphavbeta3-mediated disease, specifically
CC angiogenesis and restenosis (but also e.g. (non-)immune inflammation,
CC diabetic retinopathy, neovascular glaucoma, cancer, psoriasis, rheumatoid
CC arthritis, macular degeneration, osteoporosis etc.). The antibodies
CC contain non-murine framework regions so are suitable for use in humans.
CC Enhanced types of LM609 have affinity more than 90 times greater than
CC that of parent the parent antibody.

XX integrin - and related grafted antibodies based on murine monoclonal
XX LM609, also related nucleic acid, used to treat, prevent or diagnose
XX angiogenesis or restenosis
XX
PS Claim 62; Page 41; 129pp; English.
XX
CC W76007-W76040 are protein fragments of the grafted monoclonal antibody
CC LM609 heavy and light chain variable region. LM609 and the antibody
CC vitaxin bind selectively to integrin alphavbeta3 and can be used to
CC inhibit binding of alphavbeta3 to a ligand and thus block
CC integrin-mediated signal transduction. This is useful in the treatment,
CC prevention and diagnosis of alphavbeta3-mediated disease, specifically
CC angiogenesis and restenosis (but also e.g. (non-)immune inflammation,
CC diabetic retinopathy, neovascular glaucoma, cancer, psoriasis, rheumatoid
CC arthritis, macular degeneration, osteoporosis etc.). The antibodies
CC contain non-murine framework regions so are suitable for use in humans.
CC Enhanced types of LM609 have affinity more than 90 times greater than
CC that of parent the parent antibody.

 PS Disclosure; Page 52-53; 55pp; English.
 XX
 CC This sequence represents the heavy chain variable region of murine

CC monoclonal antibody LM609. LM609 is directed to integrin
 CC alpha-v beta-3. It selectively promotes apoptosis of vascular
 CC cells that have been stimulated to undergo angiogenesis, making it
 CC a tool for cancer diagnosis and therapy. The invention provides
 CC humanised antibodies, especially humanised LM609. In such humanized
 CC antibodies, a light chain CDR from a mouse antibody such as LM609 is
 CC grafted onto a human light chain, and a heavy chain CDR from a mouse
 CC antibody is grafted onto a human antibody heavy chain to produce
 CC libraries from which a humanised murine antibody having the desired
 CC specificity is selected. By preserving the original CDR sequences
 CC such as the HCDR3 and LCDR3 sequences of LM609 (see Y06371-72), the
 CC humanisation strategy ensures epitope conservation.

PT Humanised antibody, Vitaxin, that binds selectively to alphaVbeta3

PT integrin - and related grafted antibodies based on murine monoclonal
PT LM609, also related nucleic acid, used to treat, prevent or diagnose
PT angiogenesis or restenosis
XX
PS Claim 62; Page 41; 129pp; English.
XX
CC W76007-W76040 are protein fragments of the grafted monoclonal antibody
CC LM609 heavy and light chain variable region. LM609 and the antibody
CC vitaxin bind selectively to integrin alphavbeta3 and can be used to
CC inhibit binding of alphavbeta3 to a ligand and thus block
CC integrin-mediated signal transduction. This is useful in the treatment,
CC prevention and diagnosis of alphavbeta3-mediated disease, specifically
CC angiogenesis and restenosis (but also e.g. (non-)immune inflammation,
CC diabetic retinopathy, neovascular glaucoma, cancer, psoriasis, rheumatoid
CC arthritis, macular degeneration, osteoporosis etc.). The antibodies
CC contain non-murine framework regions so are suitable for use in humans.
CC Enhanced types of LM609 have affinity more than 90 times greater than
CC that of parent the parent antibody.

 XX LM609, also related nucleic acid, used to treat, prevent or diagnose
 XX angiogenesis or restenosis
 XX
 XX Disclosure: Page 40; 129pp; English.
 XX
 XX W76007-W76040 are protein fragments of the grafted monoclonal antibody
 XX LM609 heavy and light chain variable region. LM609 and the antibody
 XX vitaxin bind selectively to integrin alphavbeta3 and can be used to
 XX inhibit binding of alphavbeta3 to a ligand and thus block
 XX integrin-mediated signal transduction. This is useful in the treatment,
 XX prevention and diagnosis of alphavbeta3-mediated disease, specifically
 XX angiogenesis and restenosis (but also e.g. (non-)immune inflammation,
 XX diabetic retinopathy, neovascular glaucoma, cancer, psoriasis, rheumatoid
 XX arthritis, macular degeneration, osteoporosis etc.). The antibodies
 XX contain non-murine framework regions so are suitable for use in humans.
 XX Enhanced types of LM609 have affinity more than 90 times greater than
 XX that of parent the parent antibody.

CC  monoclonal antibody LM609. LM609 is directed to integrin
CC  alpha-v beta-3. It selectively promotes apoptosis of vascular
CC  cells that have been stimulated to undergo angiogenesis, making it
CC  a tool for cancer diagnosis and therapy. The invention provides
CC  humanised antibodies, especially humanised LM609. In such humanized
CC  antibodies, a light chain CDR from a mouse antibody such as LM609 is
CC  grafted onto a human light chain, and a heavy chain CDR from a mouse
CC  antibody is grafted onto a human antibody heavy chain to produce
CC  libraries from which a humanised murine antibody having the desired
CC  specificity is selected. By preserving the original CDR sequences
CC  such as the HCDR3 and LCDR3 sequences of LM609 (see Y06371-72), the
CC  humanisation strategy ensures epitope conservation.

 CC -!- FUNCTION: THIS IS THE HEME-CONTAINING COMPONENT OF THE CYTOCHROME
 CC B-C1 COMPLEX, WHICH ACCEPTS ELECTRONS FROM RIESKE PROTEIN AND
 CC TRANSFERS ELECTRONS TO CYTOCHROME C IN THE MITOCHONDRIAL
 CC RESPIRATORY CHAIN.
 CC -!- SUBUNIT: THE MAIN SUBUNITS OF COMPLEX B-C1 ARE: CYTOCHROME B,
 CC CYTOCHROME C1 AND THE RIESKE PROTEIN.
 CC -!- SUBCELLULAR LOCATION: ANCHORED IN THE INNER MITOCHONDRIAL MEMBRANE
 CC WITH ITS N-TERMINUS PROTRUDING INTO THE MITOCHONDRIAL
 CC INTERMEMBRANE SPACE (BY SIMILARITY).

XX Production of humanized mouse monoclonal antibodies

XX Disclosure; Page 49-50; 55pp; English.

XX This sequence represents the light chain V lambda region of
 CC murine monoclonal antibody LM609. LM609 is directed to integrin
 CC alpha-v beta-3. It selectively promotes apoptosis of vascular
 CC cells that have been stimulated to undergo angiogenesis, making it
 CC a tool for cancer diagnosis and therapy. The invention provides
 CC humanised antibodies, especially humanised LM609. In such humanized
 CC antibodies, a light chain CDR from a mouse antibody such as LM609 is
 CC grafted onto a human light chain, and a heavy chain CDR from a mouse
 CC antibody is grafted onto a human antibody heavy chain to produce
 CC libraries from which a humanised murine antibody having the desired
 CC specificity is selected. By preserving the original CDR sequences
 CC such as the HCDR3 and LCDR3 sequences of LM609 (see Y06371-72), the
 CC humanisation strategy ensures epitope conservation.

XX New anti alpha-v beta-3 vitronectin receptor antibodies - used for
 PT immunotherapeutic treatment of e.g. diabetic retinopathy,
 PT inflammatory disorders, atherosclerosis, restenosis, cancers or
 PT osteoporosis

XX Example 13; Page 64; 97pp; English.

XX This is the amino acid sequence of the region of the murine
 CC monoclonal antibody (MAB) D12 light chain variable region (VL)
 CC that is altered in humanised D12 VL (see also W84098). A
 CC synthetic gene (see V81902) encoding the protein was prepared
 CC from synthetic oligonucleotides and used to prepare an expression
 CC vector for humanised D12 VL. D12 is an anti-human alpha-v beta-3
 CC vitronectin receptor MAB. Humanised D12 MABs can be used for
 CC passive immunotherapy of disorders mediated by the alpha-v beta-3
 CC vitronectin receptor, e.g. restenosis and angiogenic associated
 CC diseases.

XX PT Antibodies containing donor complementarity determining regions and
PT non-human primate acceptor frameworks, having reduced immunogenicity in
PT humans -

XX PS Claim 22; Page 70-71; 123pp; English.

XX SX The invention provides an antibody (Ab) comprising donor CDRs
CC (complementarity determining regions) derived from a non-human antigen-
CC specific donor antibody, and an acceptor framework from a non-human
CC primate. The Abs are prepared by grafting CDRs from a non-human antigen-
CC specific donor antibody onto homologous Old World ape or monkey acceptor
CC frameworks. The Abs have reduced immunogenicity and are better tolerated
CC in humans (because of the close similarity between the human and primate
CC proteins), but retain the full antigen-binding affinity of the donor
CC antibody.

XX PT Antibody that binds human CD40, for treating T cell mediated
PT disorders

XX PS Claim 21; Page 32-33; 77pp; English.

XX CC The present sequence represents the variable light chain of humanised
CC antibody F4. The antibody is effective in modulating humoral immune
CC response against T cell dependent antigens, collagen induced arthritis
CC and transplant induced rejection. They are also useful for their
CC anti-inflammatory properties. The antibodies have wide therapeutic
CC applications, including autoimmune and inflammatory diseases and
CC transplantation. The antibody can be used in a pharmaceutical composition
CC for treating a patient suffering from a T cell mediated disorder. They
CC can also be used to treat autoimmune diseases, inflammatory diseases,
CC and transplantation.

 PT Murine/human chimeric monoclonal antibody, chMint5 specific for
 PT EGF-R - shows a lower immunogenicity when administered to humans
 XX
 PS Claim 7; Page 18; 28pp; English.
 XX
 CC The amino acid sequence (W00241) of the light chain variable region
 CC (VL) of the epidermal growth factor receptor (EGF-R)-specific mouse-
 CC human chimeric antibody chMint5 was deduced from a cDNA clone
 CC (T33446) obt'd. by PCR amplification of murine Mint5 hybridoma DSM
 CC ACC2150 cDNA. chMint5 comprises Mint5 VH and VL regions fused
 CC to human C-gamma1 and CK regions. Constructs were expressed in
 CC CHO cell transfectants. chMint5 shows lower immunogenicity than
 CC Mint5 when administered to humans. It can be used in diagnostic
 CC assays or used to produce immunotoxins or immunocytokines useful
 CC for tumour therapy.

4: pir4:.*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT Humanised antibody, Vitaxin, that binds selectively to alphaVbeta3

PT integrin - and related grafted antibodies based on murine monoclonal
 PT LM609, also related nucleic acid, used to treat, prevent or diagnose
 PT angiogenesis or restenosis
 PS Claim 62; Page 41; 129pp; English.
 XX
 CC W76007-W76040 are protein fragments of the grafted monoclonal antibody
 CC LM609 heavy and light chain variable region. LM609 and the antibody
 CC vitaxin bind selectively to integrin alphavbeta3 and can be used to
 CC inhibit binding of alphavbeta3 to a ligand and thus block
 CC integrin-mediated signal transduction. This is useful in the treatment,
 CC prevention and diagnosis of alphavbeta3-mediated disease, specifically
 CC angiogenesis and restenosis (but also e.g. (non-)immune inflammation,
 CC diabetic retinopathy, neovascular glaucoma, cancer, psoriasis, rheumatoid
 CC arthritis, macular degeneration, osteoporosis etc.). The antibodies
 CC contain non-murine framework regions so are suitable for use in humans.
 CC Enhanced types of LM609 have affinity more than 90 times greater than
 CC that of parent the parent antibody.

PT Antibodies containing donor complementarity determining regions and
 PT non-human primate acceptor frameworks, having reduced immunogenicity in
 PT humans -
 XX
 PS Claim 22; Page 70; 123pp; English.

XX
 CC The invention provides an antibody (Ab) comprising donor CDRs
 CC (complementarity determining regions) derived from a non-human antigen-
 CC specific donor antibody, and an acceptor framework from a non-human
 CC primate. The Abs are prepared by grafting CDRs from a non-human antigen-
 CC specific donor antibody onto homologous Old World ape or monkey acceptor
 CC frameworks. The Abs have reduced immunogenicity and are better tolerated
 CC in humans (because of the close similarity between the human and primate
 CC proteins), but retain the full antigen-binding affinity of the donor
 CC antibody.

 PS
 XX This is the amino acid sequence of the light chain variable region
 CC (VL) of humanised anti-alpha-v beta-3 vitronectin receptor
 CC monoclonal antibody D12H2LCREI. It is based on a synthetic
 CC humanised kappa chain based on a modified human REI kappa
 CC framework and complementarity determining regions from the murine
 CC anti-human alpha-v beta-3 vitronectin receptor monoclonal antibody
 CC D12 (see W84094). Humanised antibodies of the invention can be used
 CC for passive immunotherapy of a disorder mediated by the alpha-v
 CC beta-3 receptor, e.g. cardiovascular disorders or angiogenic-
 CC related disorders, such as angiogenesis associated with diabetic
 CC retinopathy, atherosclerosis and restenosis, chronic inflammatory
 CC disorders, macular degeneration, rheumatoid arthritis and cancer,
 CC e.g. solid tumour metastasis, and diseases where bone resorption is
 CC associated with pathology such as osteoporosis, hyperparathyroidism,
 CC Paget's disease, hypercalcaemia of malignancy, osteolytic lesions
 CC produced by bone metastasis, bone loss due to immobilisation or sex
 CC hormone deficiency. They can also be used for targeted drug
 CC therapy, and for detection and diagnosis.

 CC New immunoglobulin(s) having murine CDRs in human framework
 CC regions - have lower antigenicity; useful for treating e.g. HSV,
 CC CMV, T-cell disorders, myeloid disorders and auto-immune
 CC conditions
 XX
 PS Claim 40; Fig 27A; 141pp; English.
 XX
 CC The sequence shows the humanised mature light chain variable
 CC region of the mouse CMV5 antibody. Murine CDRs were used
 CC in a human Wol framework to produce a pure humanised immunoglobulin
 CC (Ig) which is capable of binding to the gH glycoprotein of
 CC cytomegalovirus. The Ig is non immunogenic, due to the human
 CC framework, and has a strong affinity for its predetermined
 CC antigen. They can be produced in large quantities via recombinant
 CC DNA and monoclonal antibody technology. The humanised Igs may be
 CC used alone or in combination with chemotherapeutic agents such as
 CC non-steroidal anti-inflammatory drugs or immunosuppressants.
 CC See also R25721-32.

 CC Monoclonal antibody specific for human 4-1BB - useful as
 CC immunospecific agent for treating autoimmune diseases and preventing
 CC organ transplant rejection
 PT
 PT
 XX Claim 2; Page 23; 37pp; English.
 PS
 XX
 CC W04332 and W04333 represent fragments of the variable regions of the
 CC heavy and light chains of the antibody of the invention. This sequence is
 CC encoded by nucleotides 1 to 324 of the coding sequence shown in T38510.
 CC The antibody of the invention (designated 4B4-1-1) is a monoclonal
 CC antibody (MAb) specific for human 4-1BB. 4-1BB encodes a member of the
 CC tumour necrosis factor receptor family of integral membrane proteins.
 CC 4-1BB is an accessory molecule expressed on the surface of T-cells in the
 CC initial stage of activation. The accessory molecules on the T-cell bind
 CC to the corresponding ligand on the antigen-presenting cell and this
 CC accelerates the activation of the T- and antigen-presenting cells,
 CC thereby promoting various immune responses. The MAb is specific for human
 CC 4-1BB, which is selectively expressed on activated T-cells. The MAb is
 CC useful as an immunosuppressive agent. It can be used for the treatment of
 CC autoimmune diseases, such as rheumatoid arthritis, and for preventing
 CC rejection response after organ transplantation.

XX PT New anti alpha_v beta_3 vitronectin receptor antibodies - used for
XX PT immunotherapeutic treatment of e.g. diabetic retinopathy,
XX PT inflammatory disorders, atherosclerosis, restenosis, cancers or
XX PT osteoporosis
XX PS Example 13; Page 59-60; 97pp; English.
XX CC This is the amino acid sequence of the light chain variable region
XX CC (VL) of the anti-human alpha-v beta-3 vitronectin receptor murine
XX CC monoclonal antibody D12, as deduced from isolated cDNA (see
XX CC W71798). D12 VH (see W84093) and VL show sequence similarity to
XX CC Kabat VH subgroup I (see W84095) and Kabat VL subgroup III (see
XX CC W84096), respectively. Humanised VH (see W84097) and VL (see
XX CC W84098) were constructed by combining the framework regions of the
XX CC human V region consensus sequences with complementarity determining
XX CC regions of D12 (keeping some preferred murine framework residues).
XX CC The humanised antibodies are specifically reactive with the human
XX CC alpha-v beta-3 protein receptor and capable of neutralising the
XX CC receptor. They can be used for passive immunotherapy of a disorder
XX CC mediated by the alpha-v beta-3 receptor, e.g. cardiovascular
XX CC disorders or angiogenic-related disorders, such as angiogenesis
XX CC associated with diabetic retinopathy, atherosclerosis and
XX CC restenosis, chronic inflammatory disorders, macular degeneration,
XX CC rheumatoid arthritis and cancer, e.g. solid tumour metastasis, and
XX CC diseases where bone resorption is associated with pathology such as
XX CC osteoporosis, hyperparathyroidism, Paget's disease, hypercalcaemia
XX CC of malignancy, osteolytic lesions produced by bone metastasis, bone
XX CC loss due to immobilisation or sex hormone deficiency. They can also
XX CC be used for targeted drug therapy, and for detection and diagnosis.

XX DR Method of resurfacing of rodent antibodies to produce humanised
XX PT antibody forms - for producing non-human antibodies with improved
XX PT therapeutic efficiency by presenting human surface on V-region
XX PS Example 1; Fig 3A; 230pp; English.
XX CC The present sequence is that of the light chain variable (LC VR) region
XX CC of murine antibody 3Hfm. This sequence was aligned with 11 other known
XX CC antibody LC VRs and a set of framework positions of surface exposed amino
XX CC acid residues was determined. This information can be used in a method to
XX CC determine how to modify a rodent antibody or fragment by resurfacing in
XX CC order to produce a humanised rodent antibody. Residues (determined from
XX CC alignment) at positions 1, 3, 5, 9, 15, 18, 46, 47, 51, 63, 66, 73, 86,
XX CC 87, 111, 115, 116 and 117 are accessible residues. None of the entire
XX CC combinations of surface residues in the murine sequences were found in
XX CC the human sequences and vice versa. However the residues in individual
XX CC positions appear to be conserved.

DR Production of humanized mouse monoclonal antibodies

PT Disclosure; Page 49-50; 55pp; English.

XX This sequence represents the light chain V lambda region of

CC murine monoclonal antibody LM609. LM609 is directed to integrin

CC alpha-v beta-3. It selectively promotes apoptosis of vascular

CC cells that have been stimulated to undergo angiogenesis, making it

CC a tool for cancer diagnosis and therapy. The invention provides

CC humanised antibodies, especially humanised LM609. In such humanized

CC antibodies, a light chain CDR from a mouse antibody such as LM609 is

CC grafted onto a human light chain, and a heavy chain CDR from a mouse

CC antibody is grafted onto a human antibody heavy chain to produce

CC libraries from which a humanised murine antibody having the desired

CC specificity is selected. By preserving the original CDR sequences

CC such as the HCDR3 and LCDR3 sequences of LM609 (see Y06371-72), the

CC humanisation strategy ensures epitope conservation.

XX New anti alpha_v beta_3 vitronectin receptor antibodies - used for

PT immunotherapeutic treatment of e.g. diabetic retinopathy,

PT inflammatory disorders, atherosclerosis, restenosis, cancers or

PT osteoporosis

XX Example 13; Page 64; 97pp; English.

XX This is the amino acid sequence of the region of the murine

CC monoclonal antibody (MAB) D12 light chain variable region (VL)

CC that is altered in humanised D12 VL (see also W84098). A

CC synthetic gene (see V81902) encoding the protein was prepared

CC from synthetic oligonucleotides and used to prepare an expression

CC vector for humanised D12 VL. D12 is an anti-human alpha-v beta-3

CC vitronectin receptor MAB. Humanised D12 MABs can be used for

CC passive immunotherapy of disorders mediated by the alpha-v beta-3

CC vitronectin receptor, e.g. restenosis and angiogenic associated

CC diseases.

PT Depletion of CD5-positive cells in vivo - using anti-CD5 antibodies
XX with humanised variable regions
PS Disclosure; Column 43-44; 77pp; English.
XX
CC A method has been developed of depleting CD5+ cells in an animal. The
CC method comprises administering a cytotoxic protein containing a modified
CC immunoglobulin (Ig) variable domain, where the protein is an anti-CD5 Ig
CC molecule or an immunconjugate or fusion protein containing an anti-CD5
CC Ig molecule, and where the modified Ig variable domain comprises at
CC least one of (a) a modified light chain variable region (see W58478 or
CC W58480), and (b) a modified heavy chain variable region (see W58479 or
CC W58481), where W58478 and W58479 are humanised forms of the H65 light
CC and heavy chain variable domains with low risk amino acid substitutions
CC [i.e. low risk of reducing antigen-binding specificity.] and W58480 and
CC W58481 are humanised forms of the H65 light and heavy chain variable
CC domains with moderate risk amino acid substitutions and are present in
CC humanised H65 antibody he3 (ATCC HB 11206). The method is useful for
CC treating autoimmune diseases, especially systemic lupus erythematosus,
CC rheumatoid arthritis, psoriasis or type I diabetes. The present sequence
CC represents the murine HYH antibody light chain variable domain.

 XX Humanised antibody, Vitaxin, that binds selectively to alphaVbeta3
 PT integrin - and related grafted antibodies based on murine monoclonal
 PT LM609, also related nucleic acid, used to treat, prevent or diagnose
 PT angiogenesis or restenosis
 XX
 PS Claim 19; Fig 7; 129pp; English.
 XX
 XX This sequence represents a LM609 grafted antibody variable light chain
 CC region. LM609 and the antibody vitaxin bind selectively to integrin
 CC alphaVbeta3 and can be used to inhibit binding of alphaVbeta3 to a ligand
 CC and thus block integrin-mediated signal transduction. This is useful in
 CC the treatment, prevention and diagnosis of alphaVbeta3-mediated disease,
 CC specifically angiogenesis and restenosis (but also e.g. (non-)immune
 CC inflammation, diabetic retinopathy, neovascular glaucoma, cancer,
 CC psoriasis, rheumatoid arthritis, macular degeneration, osteoporosis
 CC etc.). The antibodies contain non-murine framework regions so are
 CC suitable for use in humans. Enhanced types of LM609 have affinity more
 CC than 90 times greater than that of parent the parent antibody.

 PT retain binding affinity, etc.
 XX
 PS Disclosure; Page 84; 160pp; English.
 XX
 XX The amino acid sequences of the light and heavy chains of the
 CC variable domains from antibodies HYH [HYHEL-10 Fab-lysozyme complex]
 CC (R38601 and R38608, respectively), MCP [IgA Fab MCP603-phosphocholine
 CC complex] (R38602-03 and R38609-10, respectively), NEWM [Ig Fab' NEWM
 CC (R38604-05 and R38611, respectively) and KOL [IgG1 KOL] (R38606-07 and
 CC R38612, respectively) may be used to determine an alignment from which
 CC appropriate changes may be made.
 CC Unlike other methods of humanisation, which advocate the
 CC replacement of entire antibody framework regions with those of human
 CC antibodies, this method involves only the introduction of human
 CC residues into those positions not critical for antigen binding.
 CC This ensures that the binding properties of the modified antibody
 CC are not diminished.

XX Production of humanized mouse monoclonal antibodies

XX Disclosure; Page 50; 55pp; English.

XX This sequence represents the light chain variable region of a
humanised LM609 antibody. LM609 is directed to human integrin
alpha-v beta-3. It selectively promotes apoptosis of vascular
cells that have been stimulated to undergo angiogenesis, making it
a tool for cancer diagnosis and therapy. The invention provides
humanised antibodies, especially humanised LM609. In such humanized
antibodies, a light chain CDR from a mouse antibody such as LM609 is
grafted onto a human light chain, and a heavy chain CDR from a mouse
antibody is grafted onto a human antibody heavy chain to produce
libraries from which a humanised murine antibody having the desired
specificity is selected. By preserving the original CDR sequences
such as the HCDR3 and LCDR3 sequences of LM609 (see Y06371-72), the
humanisation strategy ensures epitope conservation.

 PS Claim 62; Page 41; 129pp; English.
 XX W76007-W76040 are protein fragments of the grafted monoclonal antibody
 CC LM609 heavy and light chain variable region. LM609 and the antibody
 CC vitaxin bind selectively to integrin alphavbeta3 and can be used to
 CC inhibit binding of alphavbeta3 to a ligand and thus block
 CC integrin-mediated signal transduction. This is useful in the treatment,
 CC prevention and diagnosis of alphavbeta3-mediated disease, specifically
 CC angiogenesis and restenosis (but also e.g. (non-)immune inflammation,
 CC diabetic retinopathy, neovascular glaucoma, cancer, psoriasis, rheumatoid
 CC arthritis, macular degeneration, osteoporosis etc.). The antibodies
 CC contain non-murine framework regions so are suitable for use in humans.
 CC Enhanced types of LM609 have affinity more than 90 times greater than
 CC that of parent the parent antibody.

XX Production of humanized-mouse monoclonal antibodies

XX Disclosure; Page 45; 55pp; English.

XX This sequence represents complementarity determining region 3
 CC (LCB3) of the light chain of murine monoclonal antibody LM609.
 CC LM609 is directed to integrin alpha-v beta-3. It selectively
 CC promotes apoptosis of vascular cells stimulated to undergo
 CC angiogenesis, making it a tool for cancer diagnosis and therapy.
 CC The invention provides humanised antibodies, especially humanised
 CC LM609. In such humanized antibodies, a light chain CDR from a

CC mouse antibody such as LM609 is grafted onto a human light chain,
 CC and a heavy chain CDR from a mouse antibody is grafted onto a human
 CC antibody heavy chain to produce libraries from which a humanised
 CC murine antibody having the desired specificity is selected. By
 CC preserving the original CDR sequences such as the HCDR3 and LCDR3
 CC sequences of LM609, the humanisation strategy ensures epitope
 CC conservation.

XX New immunoglobulin(s) having murine CDRs in human framework
 PT regions - have lower antigenicity; useful for treating e.g. HSV,
 PT CMV, T-cell disorders, myeloid disorders and auto-immune
 PT conditions

XX Claim 40; Fig 27A; 141pp; English.

XX The sequence shows the humanised mature light chain variable
 CC region of the mouse CMV5 antibody. Murine CDRs were used
 CC in a human Wol framework to produce a pure humanised immunoglobulin
 CC (Ig) which is capable of binding to the gH glycoprotein of
 CC cytomegalovirus. The Ig is non immunogenic, due to the human
 CC framework, and has a strong affinity for its predetermined
 CC antigen. They can be produced in large quantities via recombinant

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT integrin - and related grafted antibodies based on murine monoclonal
 PT LM609, also related nucleic acid, used to treat, prevent or diagnose
 XX angiogenesis or restenosis
 XX Claim 62; Page 41; 129pp; English.
 XX W76007-W76040 are protein fragments of the grafted monoclonal antibody
 CC LM609 heavy and light chain variable region. LM609 and the antibody
 CC vitaxin bind selectively to integrin alphavbeta3 and can be used to
 CC inhibit binding of alphavbeta3 to a ligand and thus block
 CC integrin-mediated signal transduction. This is useful in the treatment,
 CC prevention and diagnosis of alphavbeta3-mediated disease, specifically
 CC angiogenesis and restenosis (but also e.g. (non-)immune inflammation,
 CC diabetic retinopathy, neovascular glaucoma, cancer, psoriasis, rheumatoid
 CC arthritis, macular degeneration, osteoporosis etc.). The antibodies
 CC contain non-murine framework regions so are suitable for use in humans.
 CC Enhanced types of LM609 have affinity more than 90 times greater than
 CC that of parent the parent antibody.

XX Production of humanized mouse monoclonal antibodies

XX Disclosure; Page 45; 55pp; English.

XX This sequence represents complementarity determining region 3
 CC (LCDR3) of the light chain of murine monoclonal antibody LM609.
 CC LM609 is directed to integrin alpha-v beta-3. It selectively
 CC promotes apoptosis of vascular cells stimulated to undergo
 CC angiogenesis, making it a tool for cancer diagnosis and therapy.

CC The invention provides humanised antibodies, especially humanised
 CC mouse antibody such as LM609 is grafted onto a human light chain,
 CC and a heavy chain CDR from a mouse antibody is grafted onto a human
 CC antibody heavy chain to produce libraries from which a humanised
 CC murine antibody having the desired specificity is selected. By
 CC preserving the original CDR sequences such as the HCDR3 and LCDR3
 CC sequences of LM609, the humanisation strategy ensures epitope
 CC conservation.

XX New immunoglobulin(9) having murine CDRs in human framework
regions - have lower antigenicity; useful for treating e.g. HSV,
CMV, T-cell disorders, myeloid disorders and auto-immune
conditions

XX Claim 40; Fig 27A; 141pp; English.

XX The sequence shows the humanised mature light chain variable
region of the mouse CMV5 antibody. Murine CDRs were used
in a human Wol framework to produce a pure humanised immunoglobulin
(Ig) which is capable of binding to the gH glycoprotein of
cytomegalovirus. The Ig is non immunogenic, due to the human
framework, and has a strong affinity for its predetermined
antigen. They can be produced in large quantities via recombinant
DNA and monoclonal antibody technology. The humanised Igs may be
used alone or in combination with chemotherapeutic agents such as
non-steroidal anti-inflammatory drugs or immunosuppressants.

XX Production of humanized mouse monoclonal antibodies

XX Disclosure; Page 52; 55pp; English.

XX This sequence represents the light chain variable region of a
humanised LM609 antibody. LM609 is directed to human integrin
alpha-v beta-3. It selectively promotes apoptosis of vascular
cells that have been stimulated to undergo angiogenesis, making it
a tool for cancer diagnosis and therapy. The invention provides
humanised antibodies, especially humanised LM609. In such humanized
antibodies, a light chain CDR from a mouse antibody such as LM609 is
grafted onto a human light chain, and a heavy chain CDR from a mouse
antibody is grafted onto a human antibody heavy chain to produce
libraries from which a humanised murine antibody having the desired
specificity is selected. By preserving the original CDR sequences
such as the HCDR3 and LCDR3 sequences of LM609 (see Y06371-72), the
humanisation strategy ensures epitope conservation.

XX Antibodies prepn. used for treatment of auto-immune diseases - by

PT replacement of critical residues to reduce immunogenicity but

PT retain binding affinity, etc.

XX Disclosure; Page 84; 160pp; English.

XX The amino acid sequences of the light and heavy chains of the
 CC variable domains from antibodies HYH [HYHEL-10 Fab-lysosyme complex]
 CC (R38601 and R38608, respectively), MCPC [IgA Fab MCP603-phosphocholine
 CC complex] (R38602-03 and R38609-10, respectively), NEWM [Ig Fab' NEW]
 CC (R38604-05 and R38611, respectively) and KOL [IgG1 KOL] (R38606-07 and
 CC R38612, respectively) may be used to determine an alignment from which
 CC appropriate changes may be made.

CC Unlike other methods of humanisation, which advocate the
 CC replacement of entire antibody framework regions with those of human
 CC antibodies, this method involves only the introduction of human
 CC residues into those positions not critical for antigen binding.
 CC This ensures that the binding properties of the modified antibody
 CC are not diminished.

PT Depletion of CD5-positive cells in vivo - using anti-CD5 antibodies
 XX with humanised variable regions
 PS Disclosure; Column 43-44; 77pp; English.

XX A method has been developed of depleting CD5+ cells in an animal. The
 CC method comprises administering a cytotoxic protein containing a modified
 CC immunoglobulin (Ig) variable domain, where the protein is an anti-CD5 Ig
 CC molecule or an immunoconjugate or fusion protein containing an anti-CD5
 CC Ig molecule, and where the modified Ig variable domain comprises at
 CC least one of (a) a modified light chain variable region (see W58478 or
 CC W58480), and (b) a modified heavy chain variable region (see W58479 or
 CC W58481), where W58478 and W58479 are humanised forms of the H65 light
 CC and heavy chain variable domains with low risk amino acid substitutions
 CC (i.e. low risk of reducing antigen-binding specificity.) and W58480 and
 CC W58481 are humanised forms of the H65 light and heavy chain variable
 CC domains with moderate risk amino acid substitutions and are present in
 CC humanised H65 antibody he3 (ATCC HB 11206). The method is useful for
 CC treating autoimmune diseases, especially systemic lupus erythematosus,
 CC rheumatoid arthritis, psoriasis or type I diabetes. The present sequence
 CC represents the murine HYH antibody light chain variable domain.

 XX
 CC The sequences given in R37599-604 represent the complementarity-
 CC determining regions (CDRs) of a humanised antibody (Ab) which binds
 CC specifically to human interleukin (IL)-2 receptor (hIL2R). These

CC CDRs were derived from the murine anti-human IL-2 receptor monoclonal
 CC Ab (MAB) B-B10 (see also Q43242-43). This MAB is antagonistic to the
 CC binding of IL-2 to the IL-2 receptor on human T-cells. It also
 CC inhibits the human mixed lymphocyte reaction. The CDNA encoding the
 CC variable (V) region of the B-B10 Ab was cloned by PCR and sequenced
 CC (see also Q43226-32 and Q43233-36). A human Ab with high levels of
 CC amino acid sequence homology to the murine sequence was selected and
 CC the framework of this Ab was bound with the B-B10 V region CDR and a
 CC part of the framework to design several kinds of the humanised B-B10 V
 CC region (see also Q43244-45). The DNA sequence coding this humanised
 CC B-B10 was synthesised and a plasmid expressing humanised B-B10 was
 CC constructed.

XX Humanised antibody comprising - CDR region of mouse MAB B-B10
 PT specific for IL-2 receptor useful for treating carcinoma
 PT expressing IL-2 receptor

XX Claim 2; Fig 5; 62pp; English.

XX The sequences given in R37611-12 represent the heavy (H) and light (L)
 CC chain variable (V) regions of a humanised antibody (Ab) which binds
 CC specifically to human interleukin (IL)-2 receptor (hIL2R). The
 CC complementarity-determining regions (CDRs) of these V regions were
 CC derived from the murine anti-human IL-2 receptor monoclonal Ab (MAB)
 CC B-B10 (see also R37599-04). This MAB is antagonistic to the binding
 CC of IL-2 to the IL-2 receptor on human T-cells. It also inhibits
 CC the human mixed lymphocyte reaction. The cDNA encoding the variable
 CC (V) region of the B-B10 Ab was cloned by PCR and sequenced (see also
 CC Q43226-32 and Q43233-36). A human Ab with high levels of amino acid
 CC sequence homology to the murine sequence was selected and the
 CC framework of this Ab was bound with the B-B10 V region CDR and a
 CC part of the framework to design several kinds of the humanised B-B10
 CC V region. The DNA sequence coding this humanised B-B10 was
 CC synthesised and a plasmid expressing humanised B-B10 was constructed.

 PT integrin - and related grafted antibodies based on murine monoclonal
 PT LM609, also related nucleic acid, used to treat, prevent or diagnose
 PT angiogenesis or restenosis
 XX PS Claim 46; Fig 2b; 129pp; English.
 XX This sequence represents the LM609 antibody variable light chain region.
 CC LM609 and the antibody vitaxin bind selectively to integrin alphaVbeta3
 CC and can be used to inhibit binding of alphaVbeta3 to a ligand and thus
 CC block integrin-mediated signal transduction. This is useful in the
 CC treatment, prevention and diagnosis of alphaVbeta3-mediated disease,
 CC specifically angiogenesis and restenosis (but also e.g. (non-)immune
 CC inflammation, diabetic retinopathy, neovascular glaucoma, cancer,
 CC psoriasis, rheumatoid arthritis, macular degeneration, osteoporosis
 CC etc.). The antibodies contain non-murine framework regions so are
 CC suitable for use in humans. Enhanced types of LM609 have affinity more
 CC than 90 times greater than that of parent the parent antibody.

XX Humanized antibody binding to verotoxin II used for treating Verotoxin
 producing E. coli -

PS Claim 5; Fig 1b; 59pp; English.

XX This sequence represents the light chain variable region of murine
 monoclonal antibody Vtm1-1 (MuVtm1-1), an antibody that specifically
 binds to the B subunit of verotoxin II (VT2). The invention relates
 to humanised antibodies against VT2 that are capable of neutralizing
 VT2 and/or VT2 variants. The humanised antibody is a humanized form
 of MuVtm1-1 comprising the complementarity determining regions of
 MuVtm1-1 and the heavy and light chain variable region frameworks
 from the human GF4 antibody heavy and light chain frameworks.
 provided that at least 1 position selected from L49, H29, H30, H49
 and H98 is occupied by the amino acid at the equivalent position of
 the MuVtm1-1 antibody heavy or light chain variable region framework.
 CC Such humanized antibodies (see Y32406-07) have an affinity for VT2
 CC that is 3-, 5 or 10-times that of MuVtm1-1. They are used for
 CC treating a patient suffering from, or at risk of, the toxic effects
 CC from VT2 (claimed), especially for treating verotoxin producing
 CC Escherichia coli (VTEC) infection, and haemolytic uraemic syndrome
 CC (HUS).

 PS Example 14; Page 68-69; 97pp; English.
 XX This is the amino acid sequence of the light chain variable region
 CC (VL) of humanised anti-alpha-v beta-3 vitronectin receptor
 CC monoclonal antibody D12H2LCREI. It is based on a synthetic
 CC humanised kappa chain based on a modified human REI kappa
 CC framework and complementarity determining regions from the murine
 CC anti-human alpha-v beta-3 vitronectin receptor monoclonal antibody
 CC D12 (see W84094). Humanised antibodies of the invention can be used
 CC for passive immunotherapy of a disorder mediated by the alpha-v
 CC beta-3 receptor, e.g. cardiovascular disorders or angiogenic-
 CC related disorders, such as angiogenesis associated with diabetic
 CC retinopathy, atherosclerosis and restenosis, chronic inflammatory
 CC disorders, macular degeneration, rheumatoid arthritis and cancer, is
 CC e.g. solid tumour metastasis, and diseases where bone resorption is
 CC associated with pathology such as osteoporosis, hyperparathyroidism,
 CC Paget's disease, hypercalcaemia of malignancy, osteolytic lesions
 CC produced by bone metastasis, bone loss due to immobilisation or sex
 CC hormone deficiency. They can also be used for targeted drug
 CC therapy, and for detection and diagnosis.

 PT immunotherapeutic treatment of e.g. diabetic retinopathy,
 PT inflammatory disorders, atherosclerosis, restenosis, cancers or
 PT osteoporosis

XX Claim 2; Page 61-62; 97pp; English.

XX This is the amino acid sequence of the light chain variable region
 CC (VL) of humanised anti-alpha-v beta-3 vitronectin receptor
 CC monoclonal antibody D12H2HC 1-0. It is based on the VL sequence
 CC (see W84096) of human Kabat subgroup III kappa chain, with
 CC complementarity determining regions (CDRs) from the murine
 CC anti-human alpha-v beta-3 vitronectin receptor monoclonal antibody
 CC D12 (see W84093). 3 Murine framework residues (1, 49 and 60)
 CC are retained. The humanised light chain can be expressed in host
 CC cells using nucleic acid molecules (see V71800) of the invention.
 CC Humanised D12 VH is also provided (see W84097)). The humanised
 CC antibodies can be used for passive immunotherapy of disorders
 CC mediated by the alpha-v beta-3 receptor, e.g. cardiovascular or
 CC angiogenic-related disorders, such as angiogenesis associated
 CC with diabetic retinopathy, atherosclerosis and restenosis, chronic
 CC inflammatory disorders, macular degeneration, rheumatoid arthritis
 CC and cancer, e.g. solid tumour metastasis, and diseases where bone
 CC resorption is associated with pathology such as osteoporosis,
 CC hyperparathyroidism, Paget's disease, hypercalcaemia of malignancy,
 CC osteolytic lesions produced by bone metastasis, bone loss due to
 CC immobilisation or sex hormone deficiency. They can also be used for
 CC targeted drug therapy, and for detection and diagnosis.

 CC -!- FUNCTION: BINDS TO THE FC REGION OF MONOMERIC IMMUNOGLOBULINS
 CC GAMMA. MEDIATES THE SELECTIVE UPTAKE OF IGG FROM MILK AND HELPS
 CC NEWBORN ANIMALS TO ACQUIRE PASSIVE IMMUNITY. IGG IN THE MILK IS
 CC BOUND AT THE APICAL SURFACE OF THE INTESTINAL EPITHELIUM. THE
 CC RESULTANT FCERN-IGG COMPLEXES ARE TRANSCYTOSED ACROSS THE
 CC INTESTINAL EPITHELIUM AND IGG IS RELEASED FROM FCERN INTO BLOOD OR
 CC TISSUE FLUIDS (BY SIMILARITY).
 CC -!- SUBUNIT: FCERN COMPLEX CONSIST OF TWO SUBUNITS: P51, AND P14 WHICH
 CC IS EQUIVALENT TO BETA-2-MICROGLOBULIN. IT FORMS AN MCH CLASS I-
 CC LIKE HETERODIMER.
 CC -!- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
 CC -!- TISSUE SPECIFICITY: INTESTINAL EPITHELIUM.
 CC -!- SIMILARITY: STRONG, TO MHC CLASS I ANTIGENS.

XX
PS Claim 62; Page 44; 129pp; English.
XX
CC W76007-W76040 are protein fragments of the grafted monoclonal antibody
CC LM609 heavy and light chain variable region. LM609 and the antibody
CC vitaxin bind selectively to integrin alphavbeta3 and can be used to
CC inhibit binding of alphavbeta3 to a ligand and thus block
CC integrin-mediated signal transduction. This is useful in the treatment,
CC prevention and diagnosis of alphavbeta3-mediated disease, specifically
CC angiogenesis and restenosis (but also e.g. (non-)immune inflammation,
CC diabetic retinopathy, neovascular glaucoma, cancer, psoriasis, rheumatoid
CC arthritis, macular degeneration, osteoporosis etc.). The antibodies
CC contain non-murine framework regions so are suitable for use in humans.
CC Enhanced types of LM609 have affinity more than 90 times greater than
CC that of parent the parent antibody.

XX Humanised antibody, Vitaxin, that binds selectively to alphavbeta3
XX integrin - and related grafted antibodies based on murine monoclonal
XX LM609, also related nucleic acid, used to treat, prevent or diagnose
XX angiogenesis or restenosis
XX
XX Claim 19; Fig 7; 129pp; English.
XX
XX This sequence represents a LM609 grafted antibody variable light chain
XX region. LM609 and the antibody vitaxin bind selectively to integrin
XX alphavbeta3 and can be used to inhibit binding of alphavbeta3 to a ligand
XX and thus block integrin-mediated signal transduction. This is useful in
XX the treatment, prevention and diagnosis of alphavbeta3-mediated disease,

CC specifically angiogenesis and restenosis (but also e.g. (non-)immune
 CC inflammation, diabetic retinopathy, neovascular glaucoma, cancer,
 CC psoriasis, rheumatoid arthritis, macular degeneration, osteoporosis
 CC etc.). The antibodies contain non-murine framework regions so are
 CC suitable for use in humans. Enhanced types of LM609 have affinity more
 CC than 90 times greater than that of parent the parent antibody.

CC (R38604-05 and R38611, respectively) and KOL [IgG1 KOL] (R38606-07 and
CC R38612, respectively) may be used to determine an alignment from which
CC appropriate changes may be made.
CC Unlike other methods of humanisation, which advocate the
CC replacement of entire antibody framework regions with those of human
CC antibodies, this method involves only the introduction of human
CC residues into those positions not critical for antigen binding.
CC This ensures that the binding properties of the modified antibody
CC are not diminished.

XX Depletion of CD5-positive cells in vivo - using anti-CD5 antibodies
XX with humanised variable regions

XX Disclosure; Column 43-44; 77pp; English.

XX A method has been developed of depleting CD5+ cells in an animal. The
XX method comprises administering a cytotoxic protein containing a modified

CC immunoglobulin (Ig) variable domain, where the protein is an anti-CD5 Ig
CC molecule or an immunoconjugate or fusion protein containing an anti-CD5
CC Ig molecule, and where the modified Ig variable domain comprises at
CC least one of (a) a modified light chain variable region (see W58478 or
CC W58480), and (b) a modified heavy chain variable region (see W58479 or
CC W58481), where W58478 and W58479 are humanised forms of the H65 light
CC and heavy chain variable domains with low risk amino acid substitutions
CC [i.e. low risk of reducing antigen-binding specificity.] and W58480 and
CC W58481 are humanised forms of the H65 light and heavy chain variable
CC domains with moderate risk amino acid substitutions and are present in
CC humanised H65 antibody he3 (ATCC HB 11206). The method is useful for
CC treating autoimmune diseases, especially systemic lupus erythematosus,
CC rheumatoid arthritis, psoriasis or type I diabetes. The present sequence
CC represents the murine HYH antibody light chain variable domain.

Title: US-09-016-061-94

Perfect score: 55

Sequence: 1 ARNHGSFAS 10

Scoring table:

BLOSUM62
Gapop 10.0 , Gapext 0.5

Searched: 87993 seqs, 31947931 residues

Total number of hits satisfying chosen parameters: 87993

Minimum DB seq length: 0

Maximum DB seq length: 2000000000

Post-processing: Minimum Match 0%

Maximum Match 100%

Listing first 45 summaries

Database : SwissProt_39:*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PT integrin - and related grafted antibodies based on murine monoclonal
 PT LM609, also related nucleic acid, used to treat, prevent or diagnose
 PT angiogenesis or restenosis
 XX
 PS Claim 62; Page 43; 129pp; English.
 XX
 CC W76007-W76040 are protein fragments of the grafted monoclonal antibody
 CC LM609 heavy and light chain variable region. LM609 and the antibody
 CC vitaxin bind selectively to integrin alphavbeta3 and can be used to
 CC inhibit binding of alphavbeta3 to a ligand and thus block
 CC vitaxin-mediated signal transduction. This is useful in the treatment,
 CC prevention and diagnosis of alphavbeta3-mediated disease, specifically
 CC angiogenesis and restenosis (but also e.g. (non-)immune inflammation,
 CC diabetic retinopathy, neovascular glaucoma, cancer, psoriasis, rheumatoid
 CC arthritis, macular degeneration, osteoporosis etc.). The antibodies
 CC contain non-murine framework regions so are suitable for use in humans.
 CC Enhanced types of LM609 have affinity more than 90 times greater than
 CC that of parent the parent antibody.

XX Humanised antibody, Vitaxin, that binds selectively to alphavbeta3
 PT integrin - and related grafted antibodies based on murine monoclonal
 PT LM609, also related nucleic acid, used to treat, prevent or diagnose
 PT angiogenesis or restenosis

XX PS Claim 62; Page 41; 129pp; English.

XX W76007-W76040 are protein fragments of the grafted monoclonal antibody
 CC LM609 heavy and light chain variable region. LM609 and the antibody
 CC vitaxin bind selectively to integrin alphavbeta3 and can be used to
 CC inhibit binding of alphavbeta3 to a ligand and thus block
 CC integrin-mediated signal transduction. This is useful in the treatment,
 CC prevention and diagnosis of alphavbeta3-mediated disease, specifically
 CC angiogenesis and restenosis (but also e.g. (non-)immune inflammation,
 CC diabetic retinopathy, neovascular glaucoma, cancer, psoriasis, rheumatoid
 CC arthritis, macular degeneration, osteoporosis etc.). The antibodies
 CC contain non-murine framework regions so are suitable for use in humans.
 CC Enhanced types of LM609 have affinity more than 90 times greater than
 CC that of parent the parent antibody.

XX Production of humanized mouse monoclonal antibodies

XX Disclosure; Page 52-53; 55pp; English.

XX This sequence represents the heavy chain variable region of murine
 CC monoclonal antibody LM609. LM609 is directed to integrin
 CC alpha-v beta-3. It selectively promotes apoptosis of vascular
 CC cells that have been stimulated to undergo angiogenesis, making it
 CC a tool for cancer diagnosis and therapy. The invention provides
 CC humanised antibodies, especially humanised LM609. In such humanized
 CC antibodies, a light chain CDR from a mouse antibody such as LM609 is
 CC grafted onto a human light chain, and a heavy chain CDR from a mouse
 CC antibody is grafted onto a human antibody heavy chain to produce
 CC libraries from which a humanised murine antibody having the desired
 CC specificity is selected. By preserving the original CDR sequences
 CC such as the HCDR3 and LCDR3 sequences of LM609 (see Y06371-72), the
 CC humanisation strategy ensures epitope conservation.

RL Cell Motil. Cytoskeleton 26:227-238(1993).
CC -!- FUNCTION: CALCIUM-SENSITIVE PROTEIN WHICH REVERSIBLY BLOCKS THE
CC BARBED ENDS OF ACTIN FILAMENTS BUT DOES NOT SEVER PREFORMED ACTIN
CC FILAMENTS. MAY PLAY AN IMPORTANT ROLE IN MACROPHAGE FUNCTION. MAY
CC PLAY A ROLE IN REGULATING CYTOPLASMIC AND/OR NUCLEAR STRUCTURES
CC THROUGH POTENTIAL INTERACTIONS WITH ACTIN. MAY BIND DNA. UNCAPPING
CC OCCURS EITHER WHEN CA(2+) FALLS OR WHEN THE CONCENTRATION OF
CC POLYPHOSPHOINOSITIDE RISES, BOTH AT LOW AND HIGH CA(2+).
CC -!- SUBCELLULAR LOCATION: NUCLEAR, CYTOPLASMIC AND SECRETED. NUCLEAR
CC GCAP39 REDISTRIBUTES THROUGHOUT THE CYTOPLASM DURING MITOSIS AND
CC IS EXCLUDED FROM REGIONS CONTAINING CHROMOSOMES.
CC -!- TISSUE SPECIFICITY: PRESENT IN A LARGE VARIETY OF TISSUES AND IS
CC PARTICULARLY ABUNDANT IN KIDNEY AND LUNG.
CC -!- PTM: PHOSPHORYLATED. NUCLEAR GCAP39 IS MORE HIGHLY PHOSPHORYLATED
CC THAN CYTOPLASMIC GCAP39.
CC -!- SIMILARITY: BELONGS TO THE VILLIN/GELSOLIN FAMILY.
CC -!- CAUTION: THIS PROTEIN WAS ORIGINALLY THOUGHT TO BE A DNA-BINDING
CC PROTEIN WITH A HELIX-LOOP-HELIX DOMAIN.

PT Humanised antibody, Vitaxin, that binds selectively to alphaVbeta3

PT integrin - and related grafted antibodies based on murine monoclonal
 PT LM609, also related nucleic acid, used to treat, prevent or diagnose
 PT angiogenesis or restenosis
 XX
 PS Claim 62; Page 43; 129pp; English.
 XX
 CC W76007-W76040 are protein fragments of the grafted monoclonal antibody
 CC LM609 heavy and light chain variable region. LM609 and the antibody
 CC vitaxin bind selectively to integrin alphavbeta3 and can be used to
 CC inhibit binding of alphavbeta3 to a ligand and thus block
 CC integrin-mediated signal transduction. This is useful in the treatment,
 CC prevention and diagnosis of alphavbeta3-mediated disease, specifically
 CC angiogenesis and restenosis (but also e.g. (non-)immune inflammation,
 CC diabetic retinopathy, neovascular glaucoma, cancer, psoriasis, rheumatoid
 CC arthritis, macular degeneration, osteoporosis etc.). The antibodies
 CC contain non-murine framework regions so are suitable for use in humans.
 CC Enhanced types of LM609 have affinity more than 90 times greater than
 CC that of parent the parent antibody.

XX LM609 grafted antibody V-H region CDR3 protein fragment #1.

XX Vitaxin; antibody; variable region; heavy chain; light chain; integrin;
KW LM609; inhibitor; integrin-mediated signal transduction; treatment;
KW diagnosis; angiogenesis; restenosis; inflammation; diabetic retinopathy;
KW neovascular glaucoma; cancer; psoriasis; rheumatoid arthritis; murine;
KW macular degeneration; osteoporosis; primer; V-H region; CDR;
KW complementarity determining region.

XX PT Humanised antibody, Vitaxin, that binds selectively to alphaVbeta3
PT integrin - and related grafted antibodies based on murine monoclonal
PT LM609, also related nucleic acid, used to treat, prevent or diagnose
PT angiogenesis or restenosis

XX PS Disclosure; Page 40; 129pp; English.

XX W76007-W76040 are protein fragments of the grafted monoclonal antibody
CC LM609 heavy and light chain variable region. LM609 and the antibody
CC vitaxin bind selectively to integrin alphavbeta3 and can be used to
CC inhibit binding of alphavbeta3 to a ligand and thus block
CC integrin-mediated signal transduction. This is useful in the treatment,
CC prevention and diagnosis of alphavbeta3-mediated disease, specifically
CC angiogenesis and restenosis (but also e.g. (non-)immune inflammation,
CC diabetic retinopathy, neovascular glaucoma, cancer, psoriasis, rheumatoid
CC arthritis, macular degeneration, osteoporosis etc.). The antibodies
CC contain non-murine framework regions so are suitable for use in humans.
CC Enhanced types of LM609 have affinity more than 90 times greater than
CC that of parent the parent antibody.

PT Humanised antibody, Vitaxin, that binds selectively to alphaVbeta3
```

PT integrin - and related grafted antibodies based on murine monoclonal
 PT LM609, also related nucleic acid, used to treat, prevent or diagnose
 PT angiogenesis or restenosis
 XX
 PS Claim 62; Page 43; 129pp; English.
 XX
 CC W76007-W76040 are protein fragments of the grafted monoclonal antibody
 CC LM609 heavy and light chain variable region. LM609 and the antibody
 CC vitaxin bind selectively to integrin alphavbeta3 and can be used to
 CC inhibit binding of alphavbeta3 to a ligand and thus block
 CC integrin-mediated signal transduction. This is useful in the treatment,
 CC prevention and diagnosis of alphavbeta3-mediated disease, specifically
 CC angiogenesis and restenosis (but also e.g. (non-)immune inflammation,
 CC angiogenesis and restenosis of alphavbeta3-mediated disease, specifically
 CC diabetic retinopathy, neovascular glaucoma, cancer, psoriasis, rheumatoid
 CC arthritis, macular degeneration, osteoporosis etc.). The antibodies
 CC contain non-murine framework regions so are suitable for use in humans.
 CC Enhanced types of LM609 have affinity more than 90 times greater than
 CC that of parent the parent antibody.

XX This sequence represents a fragment of the vitaxin antibody variable

XX heavy chain region. Vitaxin and the antibody LM609 bind selectively to

CC integrin alphavbeta3 and can be used to inhibit binding of alphavbeta3

CC to a ligand and thus block integrin-mediated signal transduction. This is

CC useful in the treatment, prevention and diagnosis of alphavbeta3-mediated

CC disease, specifically angiogenesis and restenosis (but also e.g.

CC (non-)immune inflammation, diabetic retinopathy, neovascular glaucoma,

CC cancer, psoriasis, rheumatoid arthritis, macular degeneration,

CC osteoporosis etc.). The antibodies contain non-murine framework regions

CC so are suitable for use in humans. Enhanced types of LM609 have affinity

CC more than 90 times greater than that of parent the parent antibody.

PT Humanised antibody, Vitaxin, that binds selectively to alphavbeta3

PT integrin - and related grafted antibodies based on murine monoclonal
PT LM609, also related nucleic acid, used to treat, prevent or diagnose
PT angiogenesis or restenosis
PS Claim 62; Page 43; 129pp; English.
XX W76007-W76040 are protein fragments of the grafted monoclonal antibody
CC LM609 heavy and light chain variable region. LM609 and the antibody
CC vitaxin bind selectively to integrin alphavbeta3 and can be used to
CC inhibit binding of alphavbeta3 to a ligand and thus block
CC prevention and diagnosis of alphavbeta3-mediated disease, specifically
CC integrin-mediated signal transduction. This is useful in the treatment,
CC prevention and diagnosis of alphavbeta3-mediated disease, specifically
CC angiogenesis and restenosis (but also e.g. (non-)immune inflammation,
CC diabetic retinopathy, neovascular glaucoma, cancer, psoriasis, rheumatoid
CC arthritis, macular degeneration, osteoporosis etc.). The antibodies
CC contain non-murine framework regions so are suitable for use in humans.
CC Enhanced types of LM609 have affinity more than 90 times greater than
CC that of parent the parent antibody.

XX

XX Humanised antibody, Vitaxin, that binds selectively to alphavbeta3

PT integrin - and related grafted antibodies based on murine monoclonal

PT LM609, also related nucleic acid, used to treat, prevent or diagnose

PT angiogenesis or restenosis

XX

PS Claim 1; Fig 1a; 129pp; English.

XX

XX This sequence represents a fragment of the vitaxin antibody variable

CC heavy chain region. Vitaxin and the antibody LM609 bind selectively to

CC integrin alphavbeta3 and can be used to inhibit binding of alphavbeta3

CC to a ligand and thus block integrin-mediated signal transduction. This is

CC useful in the treatment, prevention and diagnosis of alphavbeta3-mediated

CC disease, specifically angiogenesis and restenosis (but also e.g.

CC (non-)immune inflammation, diabetic retinopathy, neovascular glaucoma,

CC cancer, psoriasis, rheumatoid arthritis, macular degeneration,

CC osteoporosis etc.). The antibodies contain non-murine framework regions

CC so are suitable for use in humans. Enhanced types of LM609 have affinity

CC more than 90 times greater than that of parent the parent antibody.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

SUMMARIES

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

XX Humanised antibody, Vitaxin, that binds selectively to alphaVbeta3

PT integrin - and related grafted antibodies based on murine monoclonal

This sequence represents the heavy chain variable region of murine monoclonal antibody LM609. LM609 is directed to integrin α -v beta-3. It selectively promotes apoptosis of vascular cells that have been stimulated to undergo angiogenesis, making it a tool for cancer diagnosis and therapy. The invention provides

CC cells that have been stimulated to undergo angiogenesis, making it
 CC a tool for cancer diagnosis and therapy. The invention provides
 CC humanised antibodies, especially humanised LM609. In such humanized
 CC antibodies, a light chain CDR from a mouse antibody such as LM609 is
 CC grafted onto a human light chain, and a heavy chain CDR from a mouse
 CC antibody is grafted onto a human antibody heavy chain to produce
 CC libraries from which a humanised murine antibody having the desired
 CC specificity is selected. By preserving the original CDR sequences
 CC such as the HCDR3 and LCDR3 sequences of LM609 (see Y06371-72), the
 CC humanisation strategy ensures epitope conservation.

XX Humanised antibody, Vitaxin, that binds selectively to alphavbeta3
 PT integrin - and related grafted antibodies based on murine monoclonal
 PT LM609, also related nucleic acid, used to treat, prevent or diagnose
 PT angiogenesis or restenosis

XX Claim 1; Fig 1a; 129pp; English.

XX This sequence represents a fragment of the vitaxin antibody variable
 CC heavy chain region. Vitaxin and the antibody LM609 bind selectively to
 CC integrin alphavbeta3 and can be used to inhibit binding of alphavbeta3
 CC to a ligand and thus block integrin-mediated signal transduction. This is
 CC useful in the treatment, prevention and diagnosis of alphavbeta3-mediated
 CC disease, specifically angiogenesis and restenosis (but also e.g.

CC (non-)immune inflammation, diabetic retinopathy, neovascular glaucoma,
 CC cancer, psoriasis, rheumatoid arthritis, macular degeneration,
 CC osteoporosis etc.). The antibodies contain non-murine framework regions
 CC so are suitable for use in humans. Enhanced types of LM609 have affinity
 CC more than 90 times greater than that of parent the parent antibody.

XX Recombinant anti-CD22 antibodies and immuno-conjugates - of
 PT antibodies linked to a therapeutic agent, e.g. Pseudomonas exotoxin
 PT or a label; for inhibiting malignant B-cells

XX Claim 6; Fig 1; 71pp; English.

XX The invention claims for a recombinant immunoconjugate comprising
 CC of a therapeutic agent (e.g. Pseudomonas exotoxin) or a detectable
 CC label peptide bonded to a recombinant anti-CD22 antibody (RFB4 IgG)
 CC having the present variable heavy (VH) chain with a cysteine residue
 CC at amino acid 44 and a variable light (VL; W66098) chain with a
 CC cysteine residue at amino acid 100. The immunoconjugate is claimed
 CC to inhibit the growth of malignant B-cells in vivo, such as rodent,
 CC canine or primate B-cells. The anti-CD22 antibody is claimed useful
 CC for detecting CD22 protein in a sample or in vivo in a mammal, and
 CC can be used in diagnostic kits.

CC humanized antibody A33 (ha33; see W48864 and W48866). The invention
 CC claims to provide a method for causing regression of a colorectal
 CC carcinoma or a gastric carcinoma by administering the radio-labelled
 CC chimeric ha33 or a radio-labelled binding fragment of ha33 to the
 CC patient.

XX Reducing immunogenicity of proteins - by modifying the amino acid
 XX sequence of the protein to eliminate potential epitopes for T-cells
 XX of a given species

XX Example 6; Fig 26; 77pp; English.

XX The invention relates to a method for the production of non-immunogenic
 XX proteins. The method comprises determining at least part of the amino
 XX acid sequence of the protein; (b) identifying in the amino acid sequence
 XX one or more potential epitopes for T-cells (T-cell epitopes) of the given
 XX species; and (c) modifying the amino acid sequence to eliminate at least
 XX one of the T-cell epitopes identified in step (b) thereby to eliminate or
 XX reduce the immunogenicity of the protein when exposed to the immune
 XX system of the given species. A method of analysing a pre-existing protein
 XX to predict the basis for immunogenic responses is also provided. The
 XX methods can be used particularly for reducing the immunogenicity of
 XX immunoglobulins or therapeutic proteins, e.g. Streptokinase (SK). The
 XX products can be used for diagnosis and therapy. The present sequence

CC represents the protein sequence of murine A33 Vh.

XX DNA encoding fusion polypeptide including protease resistant linker
XX - for making single-chain Fv antibody fragments, e.g for diagnosis
XX and treatment of cancer
XX Disclosure; Fig 12; 39pp; English.
XX The invention is directed to a novel peptide linker useful for connecting
XX polypeptide constituents into a novel linked fusion polypeptide. The
XX peptide linker includes at least one XP motif (where x is a charged
XX amino acid) and includes any of these sequences (GSTSGXPGSGSGSGSTKG;
XX GSTSGXPSGSGSTKG; or GSTSGSEKKG) to inhibit its proteolysis by
XX subtilisin or trypsin. DNA molecules encoding fusion polypeptides
XX containing two polypeptides, derived from the same multichain protein of
XX the immunoglobulin (Ig) superfamily and a peptide linker as above, are
XX particularly used to prepare single chain antibody Fv fragments (scFv),
XX potentially useful for diagnosis and treatment of cancer. The fusion
XX polypeptide containing the specified linkers is proteolytically stable
XX (associated with positioning of the P residue) and resistant to
XX aggregation, while residue X improves solubility. The present sequence
XX represents the amino acid sequence of a A33/212 scFv fragment.

DNA analysis

- for making single-chain Fv antibody fragments, e.g for diagnosis and treatment of cancer

.....

Disclosure

100

The invent

polypeptide constituents into a novel linked fusion polypeptide. The peptide linker includes at least one XP motif (where X is a charged amino acid) and includes any of these sequences (GSTSGXPGSGSGEGRK; GSTSGXPGSGEGRK; or GSTGSRSEKG) to inhibit its proteolysis by subtilisin or trypsin. DNA molecules encoding fusion polypeptides containing two polypeptides, derived from the same multichain protein of the immunoglobulin (Ig) superfamily and a peptide linker as above, are particularly used to prepare single chain antibody Fv fragments (scFv), potentially useful for diagnosis and treatment of cancer. The fusion polypeptide containing the specified linkers is proteolytically stable (associated with positioning of the P residue) and resistant to aggregation, while residue X improves solubility. The present sequence represents the amino acid sequence of a A33/218 scFv fragment.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

SUMMARIES

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
